Olesya Levytska

Senior Product Designer | HealthTech, AI & SaaS

olesyalevytskaua@gmail.com · +380 97 750 5802 · England, UK · Available for UK-based and remote roles
Portfolio · LinkedIn · GitHub · English C1 (professional working proficiency)

PROFILE

Senior Product Designer with **7 years in product and UX design** across digital healthcare, AI-powered products and complex multi-role SaaS. Bring 10 years of earlier business analysis experience to research, strategy, workflow design and measurable product decisions. Work end-to-end from discovery and prototyping to design systems, analytics and implementation with engineering teams.

SELECTED IMPACT

Registration drop-off Nearly halved after identifying a broken social sign-in and redesigning trust cues.	**Design system at scale** 65 components, 287 tokens on 84% of VesselHaven screens; hardcoded colours 283 → 0.
Most-used interaction Redesigned symptom check-ins with swipeable cards, making them the app's most popular feature.	**Faster engineering handoff** ~45% less development time reported by Remedy leadership after design system rollout.

CORE EXPERTISE

Product & UX: Product discovery, user research, journeys, information architecture, usability testing, mobile/web SaaS, accessibility, AI experience design, growth funnels and monetisation.

Systems & delivery: Figma design systems, tokens, prototyping, responsive UI, developer collaboration, GitHub, design-to-code, analytics and experimentation.

PROFESSIONAL EXPERIENCE

Computools | Sep 2025 – Present

Senior Product & UX/UI Designer · Full-time

VesselHaven | Dec 2025 – Present

Multi-role yacht-management SaaS and services marketplace connecting owners, captains, crew, brokers, guests and service providers.

- **Led discovery and cross-role UX architecture**: synthesised research into role-specific dashboards, permissions and connected journeys for trips, crew coordination, guest invitations and service booking.
- **Designed financial operations and payment workflows**, including transactions, quotations and branded Stripe payment experiences, translating complex business processes into usable interactions.
- **Reduced onboarding friction**: used Hotjar insights to simplify owner registration and guest access through magic-link invitations and progressive data collection.
- **Built a 65-component, 287-token coded design system** with Claude Code for light and dark themes, used on 84% of screens. Personally migrated **51 frontend files** (26 shared components, 25 screens) onto tokens and reusable components, cutting **hardcoded colours 283 → 0**.
- Created **29 prototypes across ~18 flows**; implemented selected flows and design-system updates in Next.js/React, then opened GitHub PRs and iterated after engineering review.

Vaults1 | Sep 2025 – Dec 2025

Designed end-to-end self-storage discovery, comparison, booking and payment journeys, from research and IA to reusable UI components, dashboards and responsive marketing pages.

PROFESSIONAL EXPERIENCE · CONTINUED

The Pause Technologies Inc. | Dec 2024 – Present

Senior Product & UX/UI Designer · Contract | Harmoni by ThePause

Women's HealthTech product combining symptom and cycle tracking, AI-powered guidance, wellness journeys and personalised insights for perimenopause and menopause.

- **Led the ThePause → Harmoni rebrand across app and web**, expanding the product experience to women in perimenopause and creating a supportive visual language, shared components and more inclusive onboarding.
- **Shifted roadmap decisions from assumptions to evidence**: partnered with developers to introduce Mixpanel tracking and connected funnel insights with RevenueCat subscription data, from first app open to trial conversion.
- **Diagnosed the actual conversion barriers**: onboarding completion was strong, while email-OTP sign-up and the paywall caused major losses. Segmented sign-up by method, uncovered a broken social login, and worked with the team on fixes; registration drop-off nearly halved after the improvements.
- **Reframed registration and the paywall around trust**: privacy information before health-data entry, separate marketing consent, more relevant sign-in choices, a personalised paywall and four testable trust-signal variants.
- **Supported a freemium product direction** based on analytics and user feedback: free symptom tracking, with premium personalised recommendations. Prepared a 90-day growth plan and pricing comparison of six women's health products for the founders.
- **Designed connected health experiences**, including perimenopause period tracking, symptom and sleep logging, AI guidance, journeys, challenges and reports to support more informed discussions with practitioners.
- Collaborated with founders, clinical advisors and engineers; specified accessible UI states and handoff behaviour for complex wearable/manual data scenarios and helped deliver web updates via GitHub and HTML.

Remedy Product Studio | Jan 2022 – Nov 2024

UI/UX Designer · Healthcare & SaaS product development

- **Owned product design from discovery to delivery** for US-focused healthcare products, including user research, competitor analysis, IA, journey maps, wireframes, prototyping, design systems and production handoff.
- **Designed across patient, clinician and administrator experiences**: health information, intake, emergency support, consultation and service workflows required clear terminology, accessible UI and careful information hierarchy.
- **Developed reusable systems and cross-team practices**; led design reviews, UX workshops and 1:1 mentoring, helping designers, PMs and engineers make consistent UX decisions.

SELECTED REMEDY PROJECTS

Caraway Health | Oct 2022 – Dec 2023

End-to-end US digital health platform, not just a student app: designed for a student-facing mobile experience, a clinician/consultant desktop SaaS, and administration and coordination workflows involving doctors, laboratories and care-service providers. All three product areas launched.

- **Designed the shared UX foundations** for connected student, clinical and admin workflows, including sign-up, medical history, insurance, telehealth, chat, lab results and recommendations.
- The student-app scope grew to **approximately 240 screens across 20+ flows**; designed safety-critical interactions such as pinned crisis resources and clinician response-time/status visibility.
- Maintained consistency across the patient app, practitioner workspace and SaaS admin as scope grew and **two rebrands rolled out over roughly 14 months**.

Selected Remedy projects · continued

ThePause | May 2024 – Oct 2024

• **Turned repetitive symptom logging into an engaging interaction**: replaced a static daily checklist with illustrated, swipeable symptom cards, making symptom check-in the product's most popular feature, according to product feedback.

• Partnered with a medical expert on health-data collection and stage-assessment UX; interactive prototypes delivered a **30% relative improvement in task accuracy** during usability testing.

Remedy Design System 2.0 | Dec 2023 – Mar 2024

• **Designed a reusable cross-project system** for web and React Native: foundations, responsive components, variants, shared layouts and specifications paired with a developer-built theme constructor.

• Leadership reported **approximately 45% less development time at handoff** after rollout, reducing repeated component work and enabling faster rebranding across projects.

Between Health | Sep 2024 – Oct 2024

Prioritised an extensive feature list into a **focused, mobile-first MVP in a few weeks** for families and doulas. Designed two distinct onboarding paths, matching and filtering, profiles, contracts and payment settings; delivered a reusable design library and production-ready prototypes for the client team.

She Matters | Jan 2024 – Sep 2024

Owned concept-to-testing design for a maternal-health experience supporting women with preeclampsia. Mapped emergency-assistance journeys and built a responsive design system, including smartwatch components for time-sensitive interactions.

EARLIER EXPERIENCE

24Eastyard · Project Manager & UX Designer (2019–2020): Owned UX flows, wireframes, prototypes, delivery planning and client communication for smart parking products (UAE) and a two-sided beauty-services platform (Egypt/Jordan).

Freelance · Web Design & Development (2021): Delivered websites from requirements and research to launch using low-code platforms and connected analytics.

Seven · UI Designer (2021): Structured Figma design files and healthcare SaaS components; created interactive prototypes and maintained consistent UI states.

Business Analyst · Various companies (2010–2020): Analysed business processes, data and operational workflows, and customised accounting and office software.

TOOLS & TECHNOLOGY

Product & research: Figma, FigJam, Miro, Jira, Hotjar, Mixpanel, Google Analytics, Amplitude, RevenueCat.

Design & delivery: GitHub, Git, VS Code, HTML/CSS, React/Next.js collaboration, WordPress, Elementor, Lottie.

AI workflows: Claude, ChatGPT, Cursor, Lovable, Midjourney, Higgsfield, AI-assisted prototyping and design-to-code.

EDUCATION & CERTIFICATIONS

2026: Google Analytics Certification · Amplitude Practitioner – Acquisition · Mixpanel Fundamentals · Hotjar Certification (Contentsquare).

UI/UX Design: Beetroot Academy (2021) · **HTML, CSS, JavaScript:** FreeCodeCamp (2017).

MA in Economics: Yuriy Fedkovych Chernivtsi National University · Accounting & Business.
